Textile Processes

“Textile Processes” constitute a small gesture that we outlined in a way to facilitate and help our greatest public, contributing for a service that we pretend to get better and more complete.

Introduction

Troficolor Têxteis, S.A. was founded in 1956 and relies currently on more than half a century of history.

For several decades, the company performs in the market, in a commercial side as well as in an industrial one. Nowadays, we assume exclusively the commercial activity through woven fabrics purchase and sale, without forgetting our experience concerning the manufacturing process, particularly in areas such as printing, dyeing and finishing.

Due to our course in the market and the constant research and gathering of new processes, we consider to be in a position, which allows us to present to our partners the present document. In it we look for to transmit some technical knowledge, but also to inform about some processes and trends in the Textile Industry.

Thus, we gather all the relevant information about this subject, building a very practical tool, that we think it could be very useful for our customers/partners. In fact, this is a document that assumes itself as a starting point for the future.

“Textile Processes” constitute a small gesture that we outlined in a way to facilitate and help our greatest public, contributing for a service that we pretend to get better and more complete.
